Frontend Developer

I always had an interest to computers since I was 4 years old. Internet was quite scary but also powerful tool to search and play video games. In time I started to fix my family's PCs.

My programming journey, which started at Çiğli Science High School, (me and a friend of mine made a project that is a complex version of laser meter with Arduino.) was crowned with my Computer Engineering degree at Manisa Celal Bayar University.

I enjoy working as Frontend. The idea of creating an aesthetic product to customers is amazing. I aim to satisfy people with my products. I spent more time with React Native, but now I'm interested in React.

Also we (Me and my friend from high school) have a youtube channel named "Filmiyorum" that we comment on movies/series which has more than 4.5k subscribers. I am voiceovering and editing our videos every week.)

TECHNOLOGIES

React Native, Swift, React, JavaScript, C, C#, Microsoft SQL Server, Delphi

SKILLS

Problem Solving, Team Coordination, Patience, Dedication, Time Management, Photoshop, Video Editing, Entry level Violin Playing, Medium level Singing.

LANGUAGES

Turkish: Native Fluency
English: C1

PROJECTS

- **Fine Dine Restaurant (React) (**https://github.com/DegirmenKagan/fine-dine-react**)**
  A react website that aimed to create modern, responsive restaurant site.

- **Calculator (iOS) (** https://github.com/DegirmenKagan/calculator-ios**)**
  For alignment and functionality training purposes, I'm building a calculator app on iOS!

- **Magic8Ball (iOS) (** https://github.com/DegirmenKagan/magic8Ball/**)**
  On Load, user is greeted by old fashioned 8 ball! Which is mostly used for asking series of questions that we wonder the answer. After asking the question; user can press on Ask button or shake the device (like a real 8ball) to see the answer!

- **Digital Business Card (React) (** https://github.com/DegirmenKagan/digitalBusinessCard**)**
  A digital Business Card with dark mode which contains about, interests of user and related social media links.
  Project is aimed to be a customizable business card. It's on production.

- **Basic Bootstrap User App (React) (** https://github.com/DegirmenKagan/basic-bs-user-app **)**
  A basic react app focused on User insertion deletion. Developing for learning bootstrap and training purposes.

- **BandNameGenerator (Flutter) (** https://github.com/DegirmenKagan/BandNameGenerator **)**
  A new Flutter project created over example Flutter project.
  It suggests you random english word pairs and lets you favorite them.
  Those that you favored are shown in Saved Suggestions page.

- **TicTacToe (React) (** https://github.com/DegirmenKagan/tictactoe**)**
  Lets you play tic-tac-toe,
  Indicates when a player has won the game,
  Stores a game's history as a game progresses,
  Allows players to review a game's history and see previous versions of a game's board.
